Černoleská 1997, Benešov**

Plastická kresba jednotlivých zubů a jejich sádrové modely:

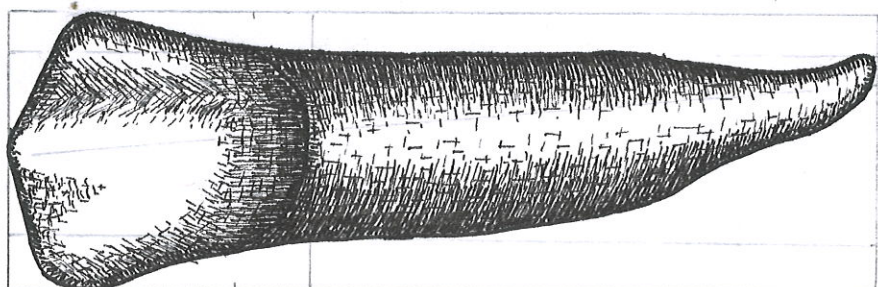

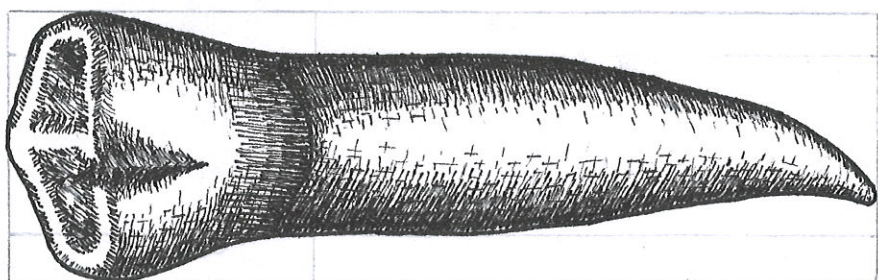

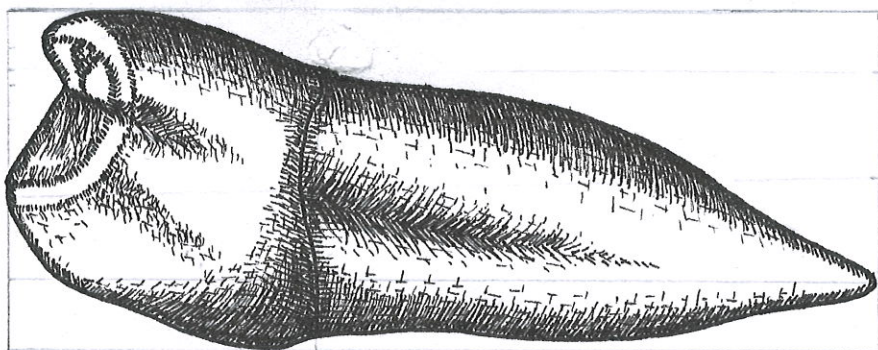

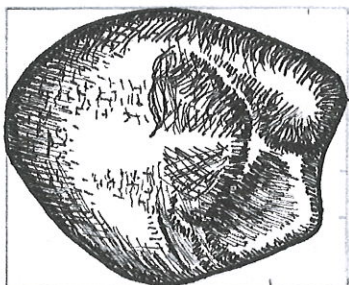

Odborné kreslení patří mezi základní dovednosti oboru AZT (asistent zubního technika). Jedná se o plastickou kresbu jednotlivých zubů. V prvním ročníku tohoto oboru používají studenti ke kreslení roller se šířkou stopy 0,5 mm a 0,25 mm. Kreslí podle předlohy, která je zmenšená. V zadání se nachází kóty, podle kterých předlohu zvětší v daném měřítku a nakreslí. Při kresbě perem se naučí daleko více ovládat jemné pohyby ruky. Tento základní a pro vlastní práci zubního technika důležitý nácvik je později přínosem při nácviku modelování zubů.
